About Centruflow

Centruflow provides a platform for building environments in which better decisions can be made.

It saves you and your team time and money by allowing data to be understood more quickly than when analysing reports, spreadsheets or text based systems.

It reduces risk by providing a big picture view of your information allowing the consequence of planned actions and historical events to be understood.

It increases your competitive advantage by providing an easy to deploy interface to your team, your customers and your partners and one which everyone can use intuitively to follow their own train of thought. This provides collaboration opportunities that can differentiate you in your marketplace.

Centruflow is a software platform providing a graphically-rich client application that communicates with a shared server-side component. These combine to analyse and make available your data in ways that provide comprehension and decision support not possible using textual interfaces alone.

About Us

Centruflow Limited is a New Zealand based software company. Their world-leading Centruflow suite of products enables users to visually inspect and understand the data that is important to the business.

Centruflow Limited was founded in 2004 by Steve Dickinson who realised during his 20 years in the IT industry that many projects fail because data is easy to create but information is difficult to find and trust. This problem is not limited to IT Projects, it is a symptom of the times in which we live.

Centruflow provides unique insight and understanding across multiple information systems using interactive diagrams. This provides a representation of information allowing people to gain insights not apparent when using text, forms and lists alone.

Thank you for taking the time to understand more about the Centruflow product. Should you have any further questions, please visit our website (www.centruflow.com).

Centrflow draws pictures that can be easily understood and trusted. It visually connects people to knowledge, linking actions to consequences.

Wouldn't it be great if every member of your team had open access to all available information without having to know how to find it?

Better still, what if everyone could see and understand the relationships between data from different places using a dynamic and highly interactive picture?

Would you like to reduce the time it takes to understand the bigger picture and the consequences of your actions from weeks and days down to minutes and seconds?

Is your organisation experiencing any of these issues?

The complex relationships between assets, events, contracts, locations, projects and time cannot be understood by individuals anymore.

Information is overloading your team and they don't have enough time to fully understand it.

The team often finds they are working with out of date information about your business.

You doubt the validity of information in reports, on white boards and held in documents and spreadsheets.

There's a general lack of trust in the information and as a result poor accountability and ownership is leading to a lack of vitality in your team.

It's difficult to make decisions when faced with multiple sources of untrustworthy and unfamiliar information.

The left hand doesn't know what the right hand is doing. One team believe A is an Apple another team believe A is an Aardvark.

When bad decisions are made due to inaccurate information the consequences are far reaching and costly.

Centrflow Key Benefits

Complete and Trustworthy

Centrflow provides tools that allow information to be retrieved from multiple source databases and the information to be viewed as a whole. This ensures the information is trusted and not duplicated. Users no longer spend lots of time trying to gain access to the multiple systems and formats in order to gain a complete understanding.

Empowering

Centrflow provides a number of user interaction tools which enable greater team involvement with the information. This allows everyone who has something of value to add to enhance the overall view and it ensures any wrong assumptions or errors are quickly removed. Sometimes you can only spot problems when you can see the complete picture.

Inclusive

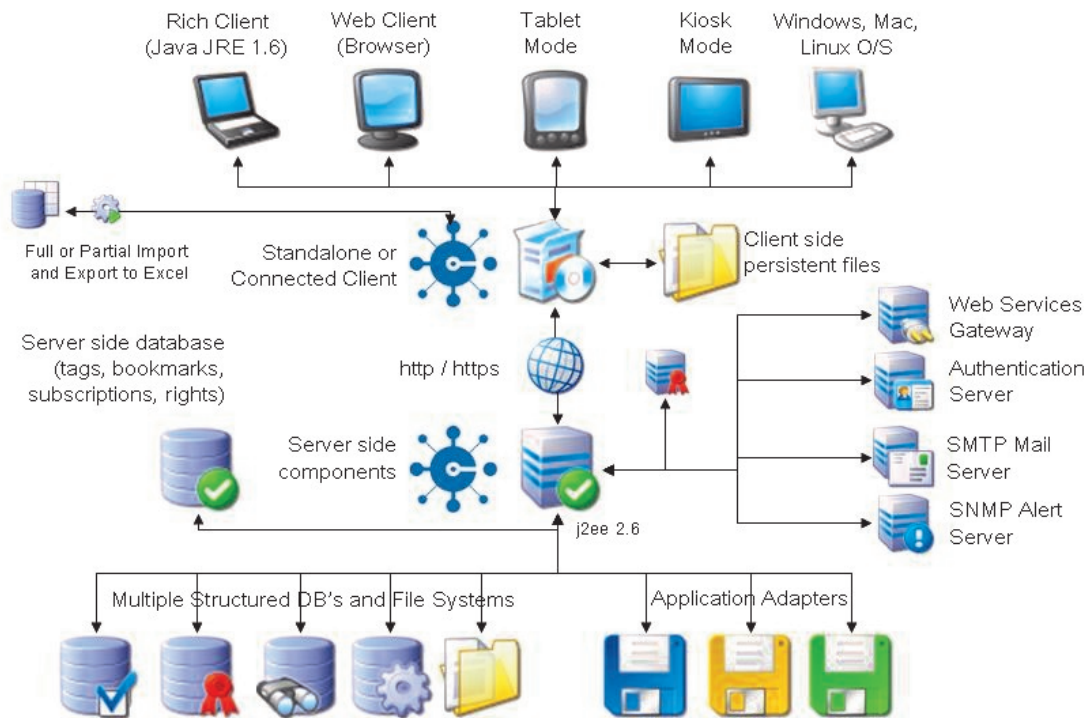

Centrflow provides a way for everyone in your team to see the information in the same way and quickly understand the bigger picture. This could be anyone from a new recruit who wants to start contributing quickly to the CEO who needs to see how the business is working towards its strategic goals.

Centrflow Core Features

<p>Four Deployment Options</p> <ol style="list-style-type: none"> 1. Bespoke build customised to a specific requirement 2. Adapter Kit bundled with existing technology 3. Standalone version for use by consultants 4. OEM SDK available for use by 3rd parties 	<p>Application Adapters</p> <p>Currently available:</p> <ul style="list-style-type: none"> • CA Unicentre • HP Peregrine <p>Planned:</p> <ul style="list-style-type: none"> • IBM OmniFind • SAP PI • Oracle Fusion • IBM Tivoli
